

DOROTHY BROWNRIGG

With her smiles she's coquettish and coy,
Each dimple a fountain of joy.
If good fortune attend
She might condescend
To cast just one glance at a "boy."

MR. OULTON

A Blue Nose guides the path of IV. B.
That's why we're such angels, you see.
Though things mathematic
Are at times problematic,
Mr. Oulton is there with the key.

ARNOLD McKINNON

The fairies make shoes, so they say,
Which cause one to dance all the day.
A boy bought a pair
At Vanity Fair
And started to shimie straight-way

MURIEL BENRUD

There's a bright, smiling lass in IV. B.
Who some day a nurse hopes to be,
From Hawarden she came,
We are proud of her name,
The reason, the world will soon see.

VIOLA ELSON

Mary's twin.
Silence is a virtue. She's quiet,
but, believe me, she's right there
when work is to be done.

CARRIE ROBINS

Do you know that demure little lass
Who sits at the back of the class?
She's always attentive,
With memory retentive,
We know that'll she make a good
pass.

KARL FOLLEY

Here's a chap with a mission,
Who hopes to be an electrician.
He takes great delight
In X-rays and arc light;
That his genius will shine, we're all
wishin'.

HENDERSON YOUNG

Pet saying—"Hey, gang, got your
algebra done?"
Ambition—To become an engineer.

MR. CAMERON

If you want to know why Class IV. A
Is at all times so happy and gay,
Turn your steps to Room 3
And they'll answer with glee,
"Mr. Cameron's our teacher—
hooray!"

GLADYS HAIGHT

The beauties of nature are Gladys'
delight,
She revels in sunlight from morning
till night.
With her crayons and paints
She'll work till she faints,
But her pictures are quite out of
sight.

CORA ARMSTRONG

We wonder if Cora will still be ad-
dicted to gum when she holds a re-
sponsible position on the king's
bench. Why has Cora become so
interested in basketball scores lately?

JOHN DENNIS

Our physics expert. Jack intends to
be a successor of the famous Mac-
Gregor. He also shines in his ad-
dresses in history. Keep it up, Jack.

HARRY MCGAW

Harry came to Collegiate one day
About the beginning of May;
He only took math
For a month and a half,
Then knew how to do it, they say.

JULIA ALLEN

Strike one, strike two, strike three,
You're out, as you can see.
Many a man
Is a baseball fan,
And that's what she hopes to be.

KATHLEEN SUTER

From "Merrie England's" distant
shore
She came from the ocean's roar.
The value of play
And of work every day
She'll impress on your mind ever-
more.

JACK REINHORN

II. B or with IV. B today
I'll compromise and take III. A.
